

MPLS3 Three-Point Locking System

Stainless steel locking system provides maximum security and weather-strip compression

Fight corrosion and forceful entry with Quanex's MPLS3 stainless steel three-point locking system designed to withstand the elements and work in tandem with quality weather-strip products.

Provides Optimal Security and Durability

The MPLS3 locking system is made of 100-percent stainless steel to provide durability, corrosion resistance and security. It is engineered with a locking "tongue" system that works in opposing directions that provides a secure lock and lasting weather-stripping compression.

Simplifies Installation

Quanex's unique screw supports prevent the face bar from flexing, encouraging easy installation and smooth operation for the life of the product.

Meets a Variety of Design Requirements

Available in brushed nickel, oil-rubbed bronze and brass finishes, the MPLS3 locking system appeals to a variety of tastes. The standard size accommodates 3.62" (92mm) hole spacing from the center of the spindle to the cover of the key cylinder. MPLS3 locking systems are available with a 45mm backset with 16mm euro groove, and can be ordered in either 6'8" or 8' pieces that can be trimmed to accommodate custom sizes.

Quanex Building Products offers a complete suite of high-performance door products, including Imperial thresholds, astragals, weather seals, door jambs and multipoint locks that are designed to provide simplicity, improve energy performance and reduce or eliminate air and water infiltration.
